TOOLSHOP PROJECT

Test Scenarios

Scenario ID	Module	Test Scenario
TS_001	Homepage	1.Verify that the homepage opens successfully. 2.Verify that the website logo is clearly visible. 3.Verify that clicking the logo returns the user to the homepage. 4.Verify that product images load without appearing broken. 5.Verify that each product card displays its correct name and price.
TS_002	Navigation	1.Verify that navigation links open the correct pages. 2.Verify that the Categories menu displays the available categories. 3.Verify that selecting a category opens the relevant product listing.
TS_003	Registration	1.Verify that a new user can register with valid details. 2. Verify that submitting an empty form displays required-field , messages. 3.Verify that leaving each mandatory field empty prevents registration. 4.Verify that invalid email formats, such as pushkar@, are rejected. 5.Verify that an already registered email cannot create another account.
TS_004	Login	1.Verify that a registered user can log in with valid credentials. 2.Verify that a valid email with an incorrect password is rejected. 3.Verify that an unregistered email cannot log in. 4.Verify that submitting both fields empty displays validation messages. 5.Verify that leaving either email or password empty prevents login.
TS_005	Logout	1.Verify that the user can log out and cannot access protected account pages afterward. 2.Verify that the account menu changes to the signed-out state. 3.Verify that protected pages cannot be accessed directly after logout. 4.Verify that pressing Back after logout does not allow protected actions. 5. Verify that refreshing the page after logout keeps the user signed out.
TS_006	Search	1.Verify that searching with a complete product name displays matching results. 2. Verify that searching with part of a product name follows the defined search behaviour. 3.Verify that a nonexistent product displays a clear no-results message. 4.Verify that spaces before and after a search term are handled correctly. 5.Verify that special characters do not crash the page.

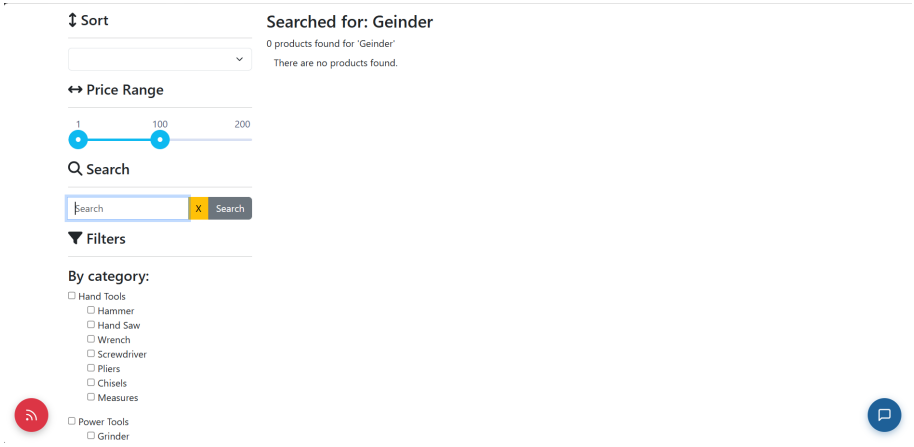

Scenario ID	Module	Test Scenario
TS_007	Categories	(Filters,Sorting) 1.Verify that selecting a category displays only products from that category. 2.Verify that selecting a subcategory shows the correct products. 1.Verify that products can be sorted by price from low to high and high to low. 2.Verify that name sorting from A–Z displays names alphabetically.
TS_008	Product Details	1.Verify that clicking a product opens its correct details page. 2.The product description is displayed clearly. 3.The user can select a valid quantity. 4.The “Add to Cart” button works for an available product.
TS_009	Shopping Cart	1.Verify that an available product can be added to the cart. 2.The cart displays the correct product name, price, and quantity. 3.Removing all products displays an empty-cart message.
TS_010	Checkout	1.Verify that checkout requires the user to complete the required sign-in step. 2.A user can sign in with valid credentials during checkout. 3.The user can continue to the next step after entering valid details.
TS_011	Payment	1.Verify that each available payment method displays its relevant input fields. 2.Required payment fields show validation errors when left empty. 3.Switching payment methods displays the correct fields for the new selection.
TS_012	Order Placement	1.Verify that completing checkout with valid demo details displays an order confirmation. 2.The confirmation shows an order reference or ID. 3.Ordered products and quantities match the checkout summary. 4. The confirmed total matches the checkout total.
TS_013	Profile	1.Verify that a logged-in user can update profile details and that changes are saved. 2.Existing profile details are displayed correctly.
TS_014	Responsive UI	1.Verify that pages remain readable and usable on mobile, tablet, and desktop screen sizes. 2.Text remains readable without overlapping other content. 3. The layout remains usable when a mobile device is rotated.
TS_015	End-to-End	Verify the complete flow: login → search product → open product → add to cart → checkout → order confirmation.

TEST CASE

TC ID	Test Scenario	Test Steps	Expected Result	Status
TC_TS_001	**Search**	**1.** Enter Hammer → Click Search **2.** Enter partial product name → Search **3.** Enter non-existing product → Search **4.** Keep search field blank → Search	**1.** Products matching Hammer should be displayed. **2.** Relevant matching products should be displayed. **3.** No matching product should be displayed / appropriate message should appear. **4.** Application should handle blank search without error.	pass
TC_TS_002	**Category**	**1.** Open category/filter section. **2.** Select a category. **3.** Select a subcategory such as Hammer. **4.** Change to another category.	**1.** Available categories should be displayed. **2.** Products should be filtered according to selected category. **3.** Only relevant products should appear. **4.** Product list should update according to newly selected category.	**Pass**
TC_TS_003	**Product Details**	**1.** Select a product from product list. **2.** Check product name. **3.** Check displayed price. **4.** Check product image. **5.** Check Add to Cart control.	**1.** Correct product details page should open. **2.** Product name should be displayed. **3.** Product price should be visible. **4.** Image should load correctly. **5.** Add to Cart option should be available for an eligible product.	**pass**
TC_TS_004	**Cart**	**1.** Open a product → Add to Cart. **2.** Open Cart. **3.** Change product quantity. **4.** Check calculated total. **5.** Remove product from cart.	**1.** Product should be added successfully. **2.** Selected product should appear in cart. **3.** Quantity should update correctly. **4.** Total should change according to quantity. **5.** Product should be removed successfully.	**pass**
TC_TS_005	**Login**	**1.** Enter registered email/password → Sign In. **2.** Enter invalid email → Sign In. **3.** Enter wrong password → Sign In. **4.** Leave required fields blank → Sign In. **5.** After successful login, use Logout.	**1.** Valid user should log in successfully. **2.** Appropriate validation/error should appear. **3.** Login should fail with an appropriate error. **4.** Required-field validation should appear. **5.** User should be logged out successfully.	**pass**

TC ID	Test Scenario	Test Steps	Expected Result	Status
TC_TS_006	**Register**	**1.** Open Register page. **2.** Check required fields. **3.** Fill valid details Register. **4.** Enter invalid email. **5.** Enter password that does not meet requirements. **6.** Submit without filling required fields.	**1.** Registration form should open. **2.** Required fields should be available. **3.** Valid registration should be processed successfully. **4.** Email validation should appear. **5.** Password requirement validation should appear. **6.** Required-field errors should appear.	**pass**
TC_TS_007	**Checkout**	**1.** Add product → Cart → Proceed to Checkout. **2.** Check/fill required information. **3.** Verify order summary. **4.** Proceed to payment. **5.** Complete valid checkout flow.	**1.** Checkout should start successfully. **2.** Required information should be validated. **3.** Correct order information and amount should appear. **4.** Payment step should work as designed. **5.** Successful completion should show confirmation.	**pass**
TC_TS_008	**Navigation**	**1.** Click Home. **2.** Open Categories. **3.** Click Contact. **4.** Click Sign In. **5.** Click Cart icon/link.	**1.** Home page should open. **2.** Category options/page should be accessible. **3.** Contact page should open. **4.** Login page should open. **5.** Cart page should open.	**pass**
TC_TS_009	**Profile**	**1.** Login with valid account → Open account/profile. **2.** Check displayed user details. **3.** Navigate through available account options. **4.** Logout and attempt to access protected account area.	**1.** Logged-in user should access account area. **2.** Correct account information should display. **3.** Available profile/account options should work. **4.** Unauthorized user should not access protected information.	**pass**
TC_TS_010	**UI Testing**	**1.** Check page layout visually. **2.** Check button size/alignment. **3.** Check text across pages. **4.** Check product images. **5.** Open forms and check fields. **6.** Check desktop/tablet/mobile viewports. **7.** Trigger form validation errors.	**1.** Elements should not overlap or appear broken. **2.** Buttons should be consistently displayed and usable. **3.** Text should be readable and consistent. **4.** Images should load without broken/distorted appearance. **5.** Fields should be properly aligned and usable. **6.** Layout should adapt to supported screen sizes. **7.** Validation messages should be clearly visible near relevant fields.	**pass**

Bug Report

Field	Details
Bug ID	BUG_001
Application	Toolshop
Module	Product Search
Bug Title	Previous search results remain displayed when the search field is cleared
Description	The search field is empty, but the page still displays the previous search keyword “Geinder” and its no-results message.
Precondition	The product listing page is open.
Steps to Reproduce - to verify	1. Enter Geinder in the search field. 2. Click **Search**. 3. Clear the search using the **X** button. 4. Check the search heading and product list.
Expected Result	If **X** resets the search, the previous search heading should disappear and products matching the remaining filters should be displayed.
Actual Result - screenshot	The input appears empty, but the page displays **“Searched for: Geinder”**, **“0 products found for 'Geinder'”**, and **“There are no products found.”**
Severity	Low
Priority	Low
Status	Needs verification
Evidence	

TSET SUMMARY

Test Summary Field	Details
Project Name	Toolshop – Practice Software Testing
Application Type	E-Commerce Web Application
Testing Type	Functional Testing & UI Testing
Modules Covered	Home, Search, Category, Product Details, Cart, Login, Register, Checkout, Navigation, Profile, UI
Total Modules Tested	11
Total Test Cases	11 Module-wise Test Cases
Passed Test Cases	Enter after execution
Failed Test Cases	Enter after execution
Not Executed	Enter after execution
Total Bugs Found	Enter confirmed bug count
Critical Bugs	0 / Enter actual count
High Severity Bugs	Enter actual count
Medium Severity Bugs	Enter actual count
Low Severity Bugs	Enter actual count
Test Environment	Google Chrome, Windows 11
Test Status	Testing Completed / In Progress
Conclusion	Toolshop application was tested for major functional and UI scenarios. Core modules including Home, Search, Category, Product Details, Cart, Login, Registration, Checkout, Navigation and Profile were covered. Any failed test cases should be reported as defects and retested after fixes.
